

#AreYouKiddingMe?

“85% of brain growth happens by age 3.”

-ForOurBabies.org

Did you know that brain plasticity (the ability to learn and modify behavior) is strongest during the early years?

Young children have twice as many synapses connecting nerve cells as adults, meaning they learn twice as fast! That’s why they say the best time to learn a new language is when you’re young.

Proper brain stimulation during the early years gives children the capacity to learn and function at a high level for the rest of their lives.
