

# #AreYouKiddingMe?

“Babies start forming memories as young as 3 months.”

-Rovee-Collier and Cuevas

The part of the brain responsible for working memory is also responsible for **maintaining focus and concentration**, as well as **developing reading skills**. With poor working memory, a child's academic future can have stumbling blocks.

Help your children strengthen their working memory. **Play cards, encourage active reading, play games that use visual memory, sing songs, and talk often** to your child, even if it's just to share what you are seeing or doing.

Remember that being in your children's earliest memories is a gift that will last their lifetime. Enjoy these moments!

The  
**Children's  
Movement**  
of Florida

Florida Power & Light Company is proud to support the efforts of The Children's Movement of Florida.

CHANGING THE CURRENT.
