

#AreYouKiddingMe?

“Most
1-year-olds are
ambidextrous.”

-BabyCenter

Did you know that most 1-year-olds use both hands equally well?

One-year-old children have not yet established **key connections in their brains** related to certain **speech and motor skills**. In the first few years of their life, 700 new neural connections are formed every second.

As these connections solidify, 2- and 3-year-old toddlers usually start to show a preference for the right or left hand, and their **physical and cognitive abilities** continue to evolve at an astonishing rate.

The first few years set the foundation for children's lives. That is why **The Children's Movement** supports expanding Help Me Grow, a child development resource for parents, in its 2017 legislative agenda.

The
**Children's
Movement**
of Florida

Florida Power & Light Company is proud to support
the efforts of The Children's Movement of Florida.

CHANGING THE CURRENT.
